

ECO WASTE SOLUTIONS

Animal Waste Solution

Dead Animal Disposal Business Dorchester, Ontario

the challenge

The Hunter family of Dorchester Ontario has been in the dead animal disposal business for over 30 years. They operate 2 businesses: Ontario Pet Cremation & Memorial Services and Clearblu Disposal.

The operation included the use of a Pet cremation small incinerator to cremate pets. However, the system lacked the capacity and reliable design required to keep up with the growing demand. Recognizing the lack of available pet cremation services and the absence of systems designed to handle larger animals, the Hunter family expanded the operation.

They required equipment that could accomplish two very important functions: private pet cremations and incineration of large animals from research facilities and off-spec meats from government inspection plants.

It would have to be clean-burning to satisfy air emission regulations. In addition, the Hunters insisted on an environmentally responsible solution that would not effect a nearby residential development. □

our solution

Following a thorough review of commercially available systems, the Eco Waste Solutions ECO Model Animal Cremator was chosen for the project.

The advanced technology, including integrated Continuous Emissions Monitoring complies fully with the Ontario Ministry of the Environment regulations. It's smokeless, odourless operation goes unnoticed by neighbours.

After the first unit was commissioned the demand for this service continued to grow leading to subsequent purchases of 2 more Eco Model units. □

the results

Animal Health Protection

Local livestock and domestic animals are protected from introduction to disease and research pharmaceuticals by the diversion of research animals from in the feed chain. □

Responsive Pet Cremation Services

Increased capacity has improved the ability to respond quickly to local pet owners, who need this specialized service. □

Environmental Protection

The Hunter family is proud to lead the industry by operating a technologically advanced cremation system that has been proven to be cleaner burning. □

project information

Location:	Dorchester, Ontario Canada
Model:	ECO 1200L, 1300L and 1200L
Capacity:	processing capacity of up to 10 tons per week
Waste Type:	Animal Carcasses
Installation:	1999, 2002, 2007
